

HOW TO GET A SINGLE ITEM OF WORDPRESS

1. Go to (IMAB) Pages for create new page for target

(IMAB) Pages

General

Page: Select Page Editor: - Code Editor (recommended) Page Variables

New Page or Overwrite Page

The use of the same variable will cause the old pages will be overwritten.

Title: how to Variable: how_t Template: None Option/URL: Create Page

Or using (IMAB) Menu

Items

For type `New Page / in-link`, when used same variable name with prefix page will be make in-link and if no page will be create new page.

Label	Variables	Icon A	Icon B	Email/URL/Phone	Desc	Type
Dashbo.	dashboard	ion-ios-t	ion-ios-t	blank = auto		Divider / T
Posts	posts	ion-andi	ion-andi	blank = auto	Exempl	New Page ,
How to	how_to	ion-ios-t	ion-ios-t	blank = auto		New Page ,

2. Then go to (IMAB) Tables, Current Table use "Example Table WP-REST API Single Page"

(IMAB) Tables

You can using menu (IMAB) Recovery and Issue to check the conflicting table

General

Current Table: --| New Table Reload Need C: - 10 How muc

- | Example Table WP-IMA-WOO Products
- | Example Table WP-JSON-API
- | Example Table WP-Job Manager
- | Example Table WP-RESTAPI Categories
- | Example Table WP-RESTAPI Media
- | Example Table WP-RESTAPI Pages
- | Example Table WP-RESTAPI Posts
- | Example Table WP-RESTAPI Posts V1
- | Example Table WP-RESTAPI Single Page
- | Example Table WP-WOO Categories

3. Then check and edit properties table:

Page Target (Controller) : Your Page
 Table Name (or singular name) : Your Table
 Template for Data Listing : Home Page (Without Single Page)
 URL List Item : http://wp.org/wp-json/wp/v2/pages?slug=**how-to**
 URL Single Item :
 Dinamic on 1st param : Unchecked / No checked
 Source JSON : Online

Page Target (Controller) : Your Page
 Table Name (or singular name) : Your Table
 Template for Data Listing : Home Page (Without Single Page)
 URL List Item : http://wp.org/wp-json/wp/v2/posts?slug=**how-to**
 URL Single Item :
 Dinamic on 1st param : Unchecked / No checked
 Source JSON : Online

The screenshot shows a configuration interface with two main sections: 'General' and 'Properties'. In the 'General' section, the 'Page Target (Controller)' dropdown is highlighted with a red box. The 'Properties' section contains several fields, each highlighted with a red box: 'Table Name (or singular name)' with the value 'how-to', 'Template for Data Listing' with 'Homepage (Without S', 'Source JSON' with 'Online', 'URL List Item' with 'http://wp.org/wp-json/wp/v2/pages?slug=how-t', 'URL Single Item' with 'http://domain/json/single_movie?id=', and the 'Parameter' section where 'Dinamic on 1st param' is unchecked. There are also informational notes and examples provided for some fields.

4. Then save your table
