

1. Go to (IMAB) Table, add column with column type: "Slidebox" and variable name: "x_metadata.slider"

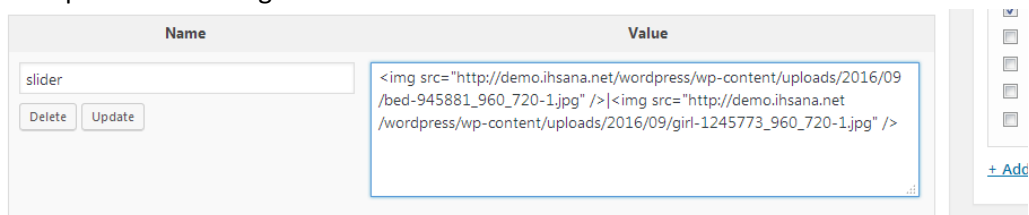

2. Then go to your wordpress dashboard, insert custom fields for slider data, example value: "slide1|slide2|slide3" and name: slider

In app like this:

3. Refresh your emulator, if slider appear in your app, text "slide1" change to HTML Code, example code for images

So in app like this:
