

1. Create page example name: **test**
2. Open explorer/finder, go to and open file **/ima-builder/output/yourapp/www/js/app.js**
3. Search routes code:

```

138     "myapp-side_menu" : {
139         templateUrl:"templates/myapp-slide_tab_menu.html",
140         controller: "slide_tab_menuCtrl"
141     },
142     "fabButtonUp" : {
143         templateUrl: '',
144     },
145 }
146 })
147
148 .state("myapp.test", {
149     url: "/test",
150     views: {
151         "myapp-side_menu" : {
152             templateUrl:"templates/myapp-test.html",
153             controller: "testCtrl"
154         },
155         "fabButtonUp" : {
156             templateUrl: '',
157         },
158     }
159 })
160
161 .state("myapp.user_login", {
162     url: "/user_login",
163     views: {
164         "myapp-side_menu" : {
165             templateUrl:"templates/myapp-user_login.html",
166             controller: "user_loginCtrl"
167         },

```

Then copy.

4. Goto IMA BuilderZ -> Extra Menu -> Custom JS
5. Paste and edit routes codes

**Router (\$stateProvider)**

Writing your codes with using:

```
.state('...',{url:'...',templateUrl:'...',controller:'...'})
```

**Go to -> Extra Menu -> Custom JS**

```

1 .state("myapp.test with param", {
2   url: "/test/:myterm",
3   views: {
4     "myapp-side_menu" : {
5       templateUrl:"templates/myapp-test.html",
6       controller: "testCtrl"
7     },
8     "fabButtonUp" : {
9       templateUrl: '',
10    },
11  }
12 })

```

**Paste Routes code and edit name and param url**

Press **ctrl-space** to activate autocompletion.
