

URL List Item should have JSON array can contain **multiple objects** and **URL Single Item** should have JSON objects can contain **multiple name/values**. Some condition data not place on 1st objects/name, so you need bypass this variable by using 1st variable option.

List Item Vs. Single Item

1st Variable	JSON for List Item	JSON for Single Item
	<pre>[{ id: "1", title: ".....", content: "....." }, { id: "2", title: ".....", content: "....." }]</pre>	<pre>{ id: "1", title: ".....", content: "....." }</pre>
.data	<pre>{ data: [{ id: "1", title: ".....", content: "....." }, { id: "2", title: ".....", content: "....." }] }</pre>	<pre>{ data: { id: "1", title: ".....", content: "....." } }</pre>

Tables Properties

Source JSON	Use for	URL List Item	URL Single Item	Dinamic on 1st param
Offline	normal			unchecked
Offline	relation table	?col_var=1		checked
Online	normal	http://domain/restapi.php?json=yyy		unchecked
Online	relation table	http://domain/restapi.php?var=xxx&json=yyy	http://domain/restapi.php?json=zzz&id=	checked
Online	normal	http://domain/wp-json/wp/v2/posts		unchecked
Online	relation table	http://domain/restapi.php?var=xxx&json=yyy	http://domain/wp-json/wp/v2/posts/	checked

EXAMPLE TABLE SCHEMA

Table Content

Column Name	Type
content_id	ID
content_title	Title / Heading
subchapter_id	Text
content_body	Trust as HTML

Table SubChapter

Column Name	Type
subchapter_id	ID
subchapter_name	Title / Heading
chapter_id	Text

Table Chapter

Column Name	Type
chapter_id	ID
chapter_name	Title / Heading

You should create table content for 1st time

Relation on Tables

Table Name	Relation for Table	URL List Item	URL Single Item	Dinamic on 1st param
content	none	http://domain/restapi.php?subchapter_id=1&json=content	http://domain/restapi.php?json=content&content_id=	checked
subchapter	content	http://domain/restapi.php?chapter_id=1&json=subchapter	http://domain/restapi.php?json=subchapter&subchapter_id=	checked
chapter	subchapter	http://domain/restapi.php?json=chapter		unchecked
