

Go to TABLE Menu:

Set Virtual table = bookmark

Tips For make it easy reading JSON data, you can using <https://goo.gl/2Fmqrv> (chrome) or <https://goo.gl/jVZgDq> (firefox)

Tables

You can using menu [recovery](#) and [issue](#) to check the conflicting table.

1. Select a table that you want create a bookmark source

General

Current Table **Need Column** **Page Target (Controller)**
it's will overwrite pages

Properties

Singular/Table Name SQL ***
note maximum length of 16 characters and change title will be create new table

Template for Data Listing **Template for Single Data**
Template for list items Template for single item

Manual Code
Alternative template

Color **Source JSON **** **1st Variable for List Item** **1st Variable for Single Item**

format: text format: a-z,A-Z,0-9., and _
Don't start variable with numbers

format: text format: a-z,A-Z,0-9., and _
Don't start variable with numbers

format: text format: a-z,A-Z,0-9., and _
Don't start variable with numbers

Capability **Max Item 1st Load** **Next Item perscroll**
fetching perscroll ionicons class

Default Icon **Sample Data** Create JSON File

Relation To Table **Offline Storage** **Motions** **Virtual Table**
Animation page bookmark/cart

Price **Currency**
column for price Currency Symbol

2. Set Virtual Table = Bookmark

Goto PAGE Menu, see Page Bookmark created automatically

Page name: "xxxx_bookmark" and title "Bookmark of xxxx" (xxxx = your table name)

Page Manager **Page Bookmark created automatically**

key icon mean lock/unlocking a page that cannot be edited and star icon with blue border mean the first page will appear and page without star can not used for a link.

Lock	Index	Title	Info	Link
		About US page-builder	prefix: about_us for: - by: menu	ng-href="#/books/about_us" ui-sref="books.about_us"
		Chapters	prefix: chapters for: table-list by: table (chapter)	ng-href="#/books/chapters" ui-sref="books.chapters"
		Bookmarks Of Contents	prefix: content_bookmark for: table-bookmarks by: table (content)	ng-href="#/books/content_bookmark" ui-sref="books.content_bookmark"
		{{ Content title }}	prefix: content_singles for: table-item by: table (content)	ng-href="#/books/content_singles/{{item.id}}" ui-sref="books.content_singles({{id:item.id}}"
		Contents	prefix: contents for: table-list by: table (content)	ng-href="#/books/contents/{{item.id}}" ui-sref="books.contents({{chapter:item.id}}"
		Wizard page-builder	prefix: dashboard for: - by: menu	ng-href="#/books/dashboard" ui-sref="books.dashboard"

Now, Go to Menu:

Add Menu Bookmark with variable name: "xxxx_bookmark" (change xxxx with your table name)

Items

For type 'page (in-link)', when used same variable name with prefix page will be make in-link and if no page will be create new page .

Label *	Variable *	Icon A *	Icon B	Email/URL/Phone	Desc	Type
Dashboard	dashboard	ion-ios-hor	ion-ios-hor			Divider
Contents	contents	ion-ios-bool	ion-android-		Example I	Page (↑)
Chapters	chapters	ion-ios-bool	ion-android-		Example I	Page (↑)
bookmarks	bookmarks content_bookmark	ion-pin	ion-ios-tele			Page (↑)
Help	help	ion-help-cir	ion-help-cir			Divider
Faqs	faqs	ion-android-	ion-android-		FAQs and	Page (↑)

TIP: for refresh

Web Emulator

Not all features can

- Admob Pro, Pus
- Type menu oper
- Icon and Splash
- Fullscreen mode
