

We are not recommend using cPanel or Hosting because security risk (without auth) and this tool also use nodejs for build a project.

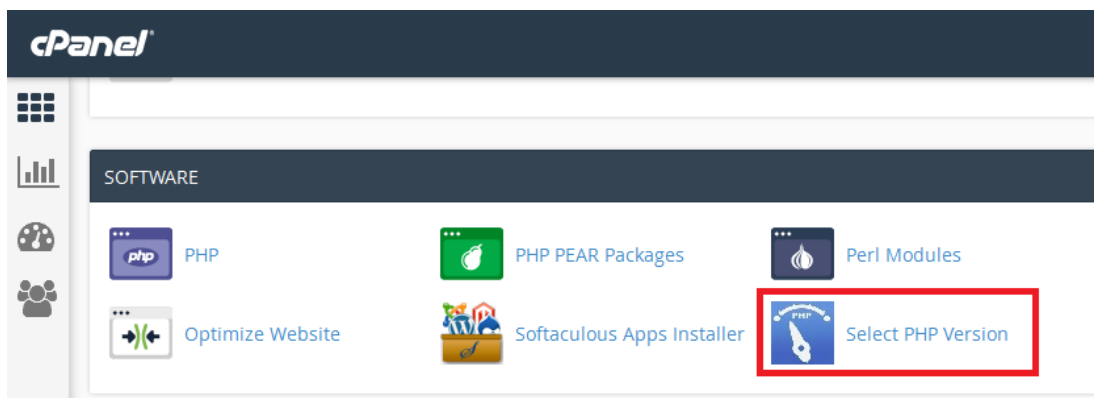

Login to your cPanel

1. Check your hosting, this tool required 20mb/project + size this tool. So, you need 50mb only for 1 project.

We are recommend using unlimited/unmetered hosting. If less you will get a message permission danied or emulator not work.

2. Then find and click **Select PHP Version** menu

3. Select PHP Version 5.6, then click Save and Use Defaults

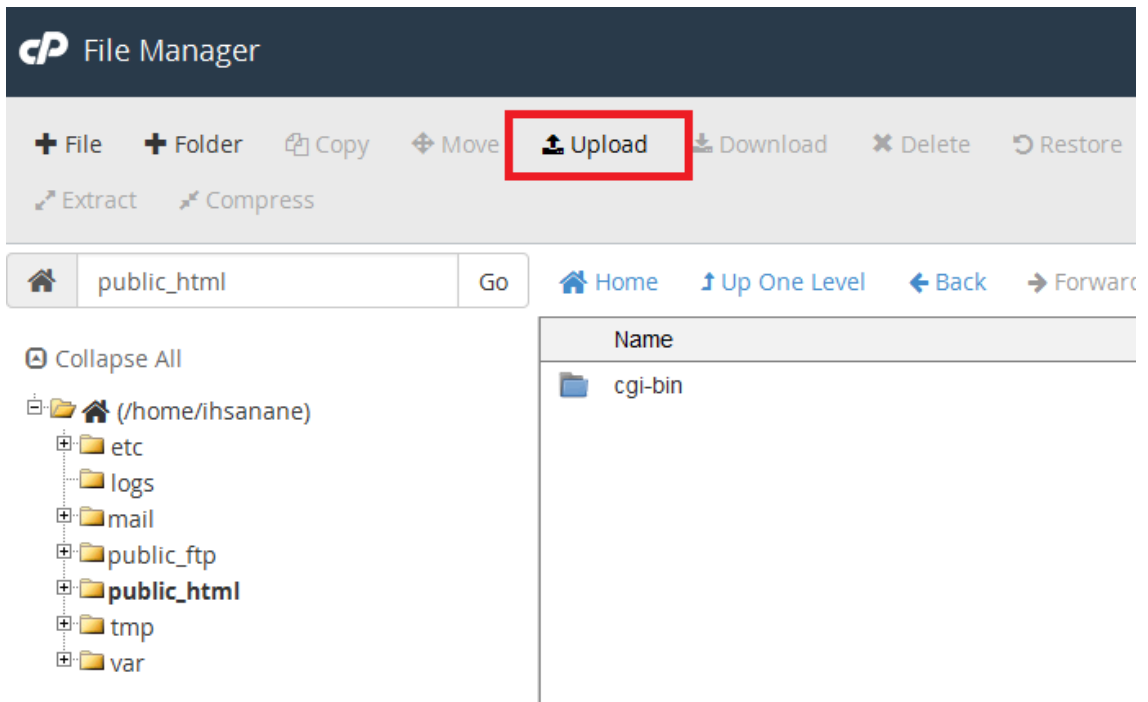

The screenshot shows the cPanel PHP Selector interface. The current PHP version is 5.6. The 'Set as current' button is highlighted with a red box. The '5.6' option in the dropdown menu is also highlighted with a red box. The 'json' extension is checked and highlighted with a red box. The 'Save' and 'Use Defaults' buttons are highlighted with a red box.
