

# KCFinder not working when using IP Address and Port

--- Issue Rev 17.07.01 or Older ---

1. Go to file `\system\plugin\kcfinder\conf\config.php`
2. Open with notepad++ then Find the line `'cookieDomain' => ""`
3. Replace with this code:

```
'cookieDomain' => parse_url($_SERVER["HTTP_HOST"], PHP_URL_HOST),
```

Example like this:

```
81 // MISC SETTINGS
82 'filenameChangeChars' => array(' ' => "_", ':' => "."),
83 'dirnameChangeChars' => array(' ' => "_", ':' => "."),
84 'mime_magic' => "",
85
86 'cookieDomain' => parse_url($_SERVER["HTTP_HOST"], PHP_URL_HOST),
87 'cookiePath' => "",
88 'cookiePrefix' => 'IHS_KCF_',|
89
90
91 // THE FOLLOWING SETTINGS CANNOT BE OVERRIDED WITH SESSION SETTINGS
92
93 '_normalizeFileNames' => false,
94 '_check4htaccess' => false,
95 //'_tinyMCEPath' => "/tiny_mce",
96
```
